

Introdução a simulações da mecânica dos sólidos com Abaqus/CAE

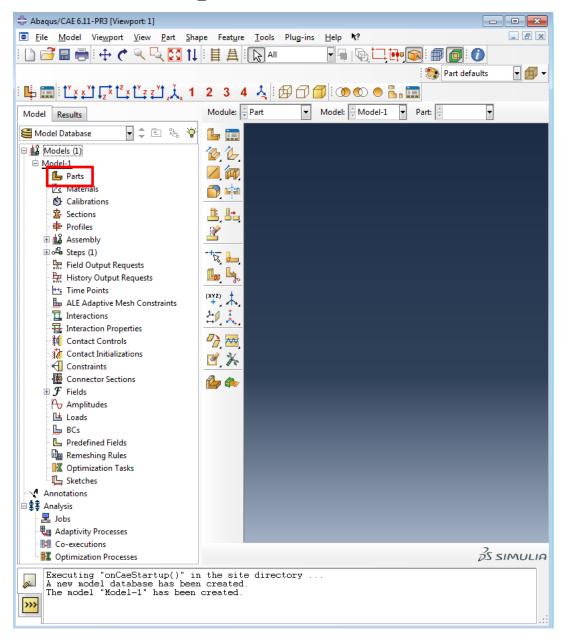

Eng. M.Sc. Lahis Souza de Assis lahis.assis@engenharia.ufjf.br

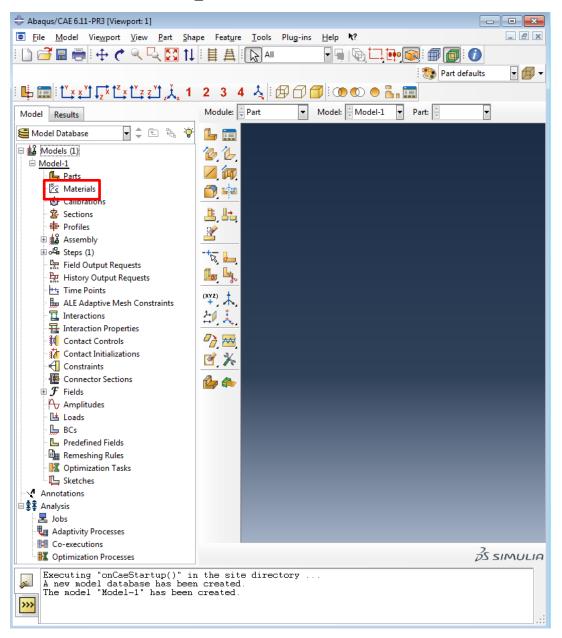

Agenda

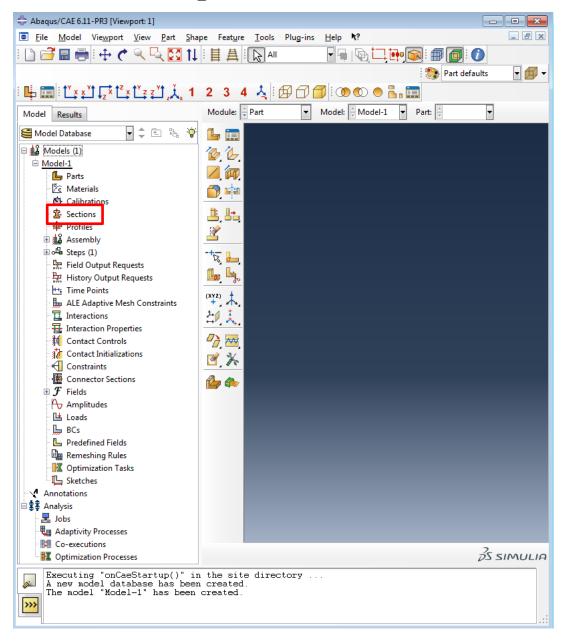

- Apresentação da interface gráfica.
- Passo a passo para a construção de um modelo.
- Construção de um modelo na prática.
- Ferramentas/funcionalidades interessantes.

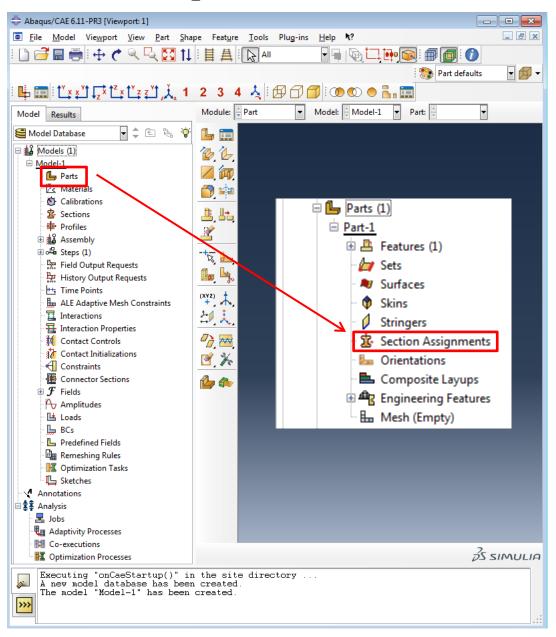

Apresentação da interface gráfica

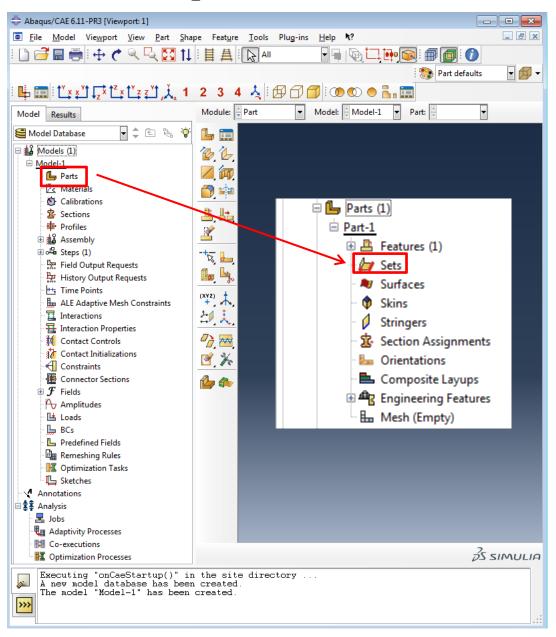

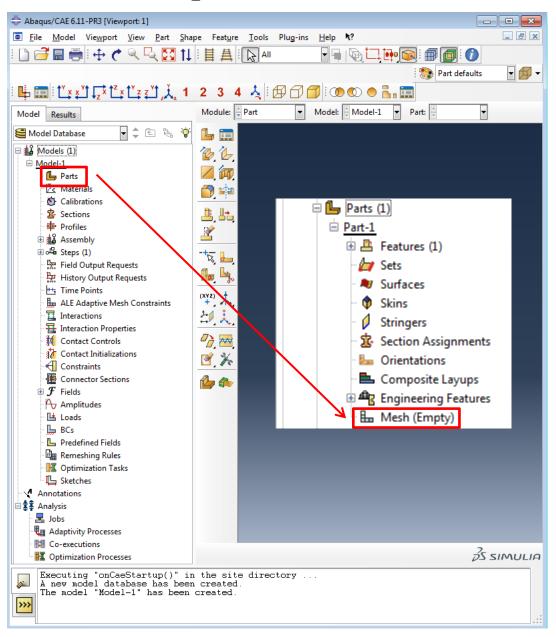

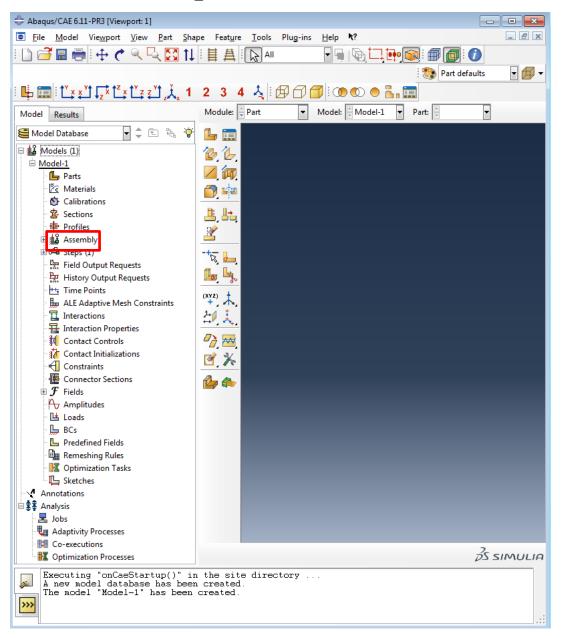

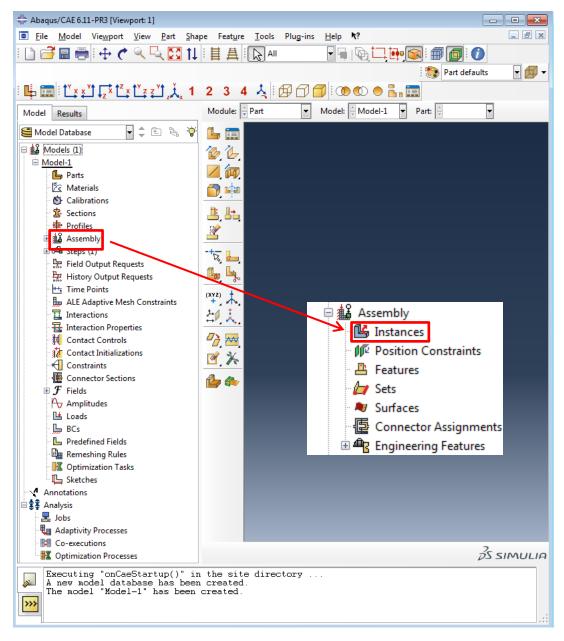

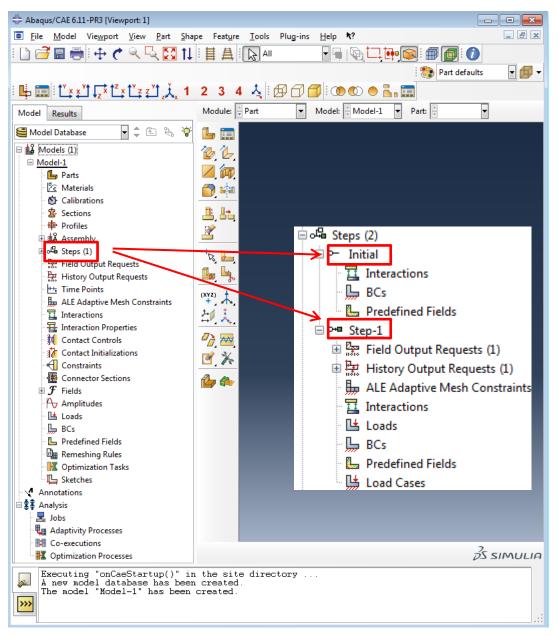

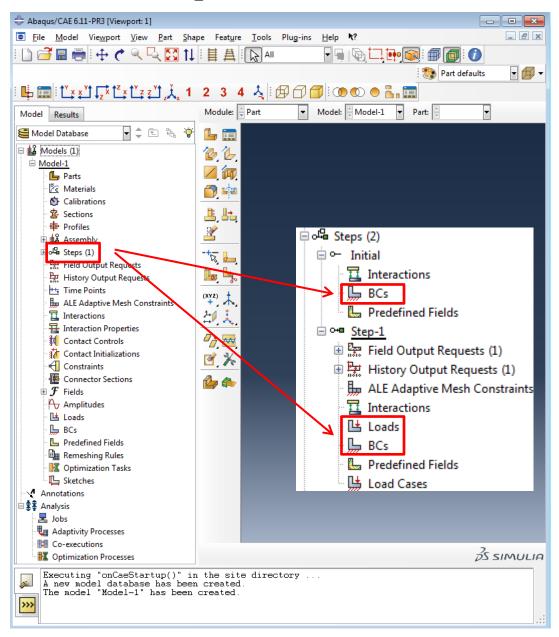

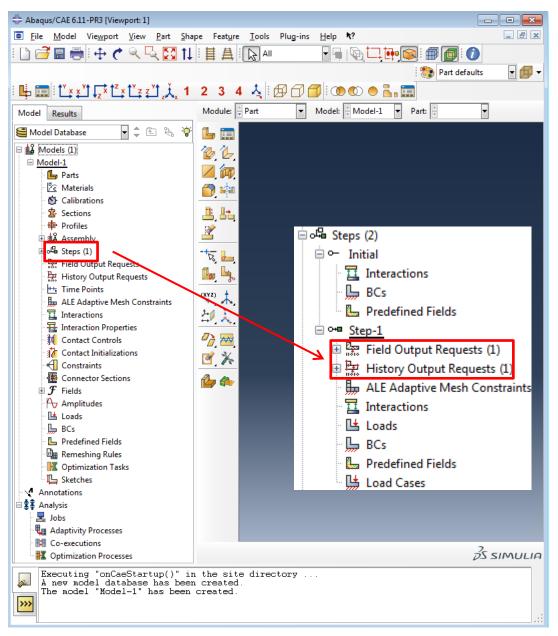

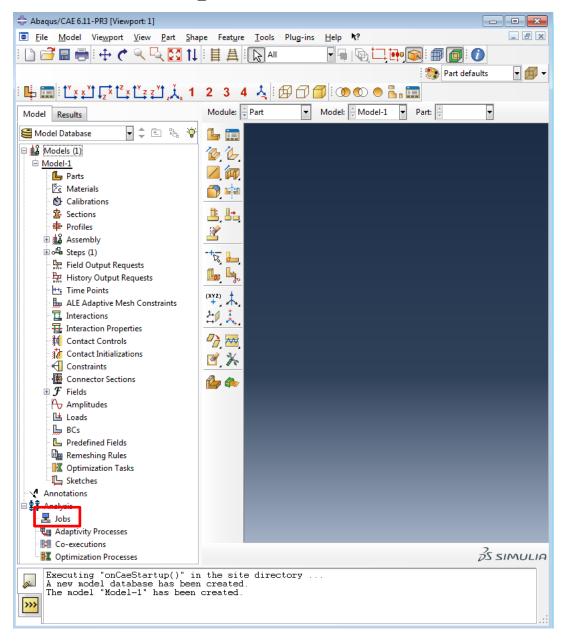

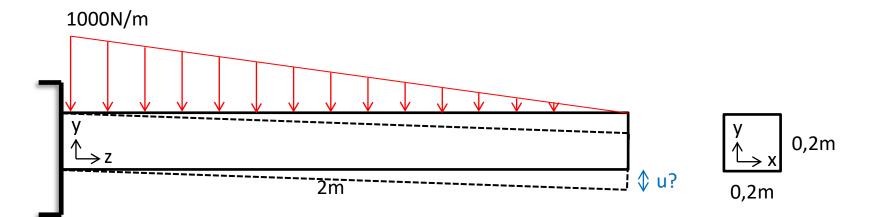

Construção de um modelo na prática

Propriedades:

- Módulo de Young = 200 GPa
- Coeficiente de Poisson = 0,3

Modelo constitutivo elástico linear:

$$\sigma = C\varepsilon$$

Equação de equilíbrio de Cauchy:

$$\nabla \cdot \sigma = 0$$

Solução analítica:

$$u = \frac{pl^4}{30EI} = \frac{1000 \times 2^4}{30 \times 200 \times 10^9 \times 0.2 \times 0.2^3} = 2 \times 10^{-5} \text{m}.$$

Unidades no SI:

- Comprimento = m
- Força = N
- Tensão = N/m²
